

Podcast setup

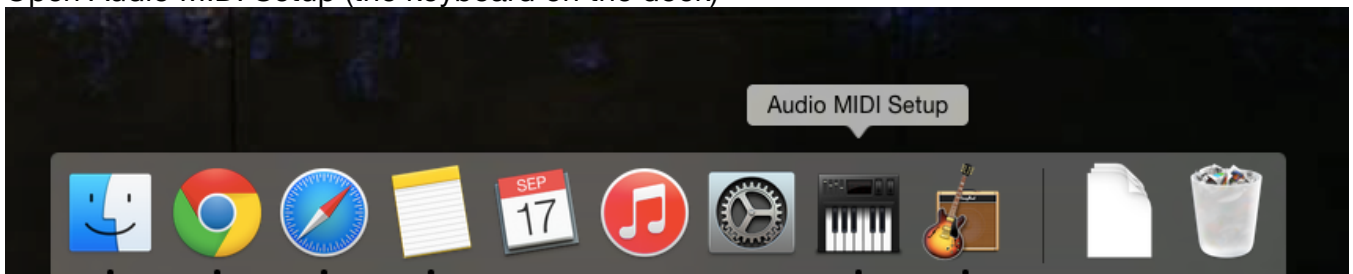

Step 1 V Important

Make sure both microphones are plugged into the laptop

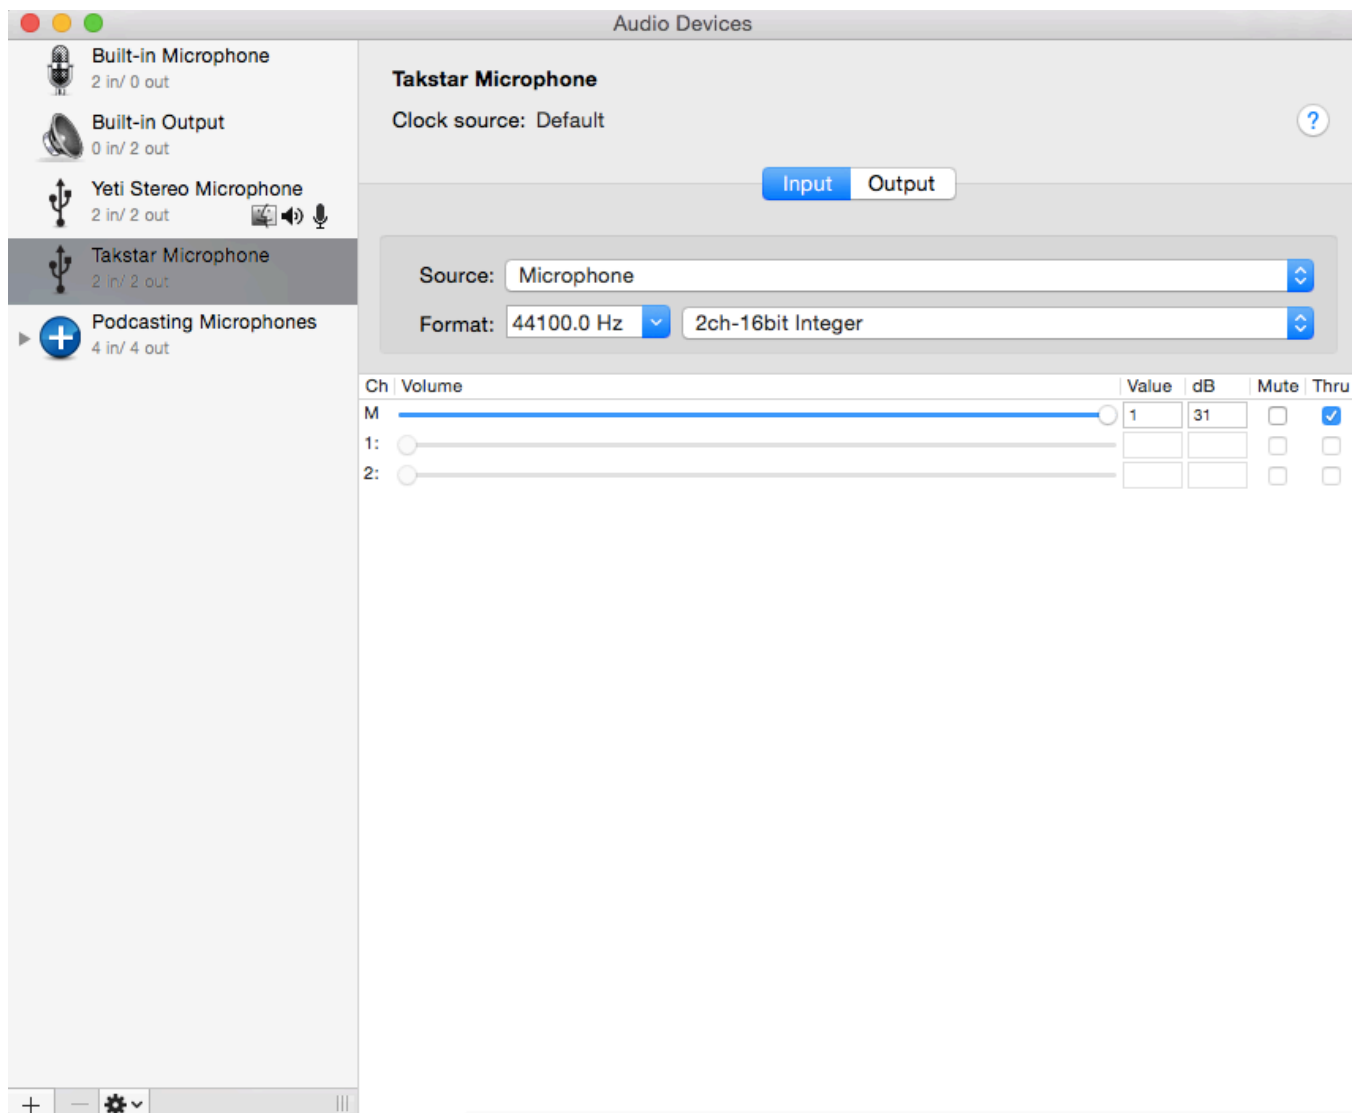

Step 2 USB Connection == True

Open Audio MIDI Setup (the keyboard on the dock)

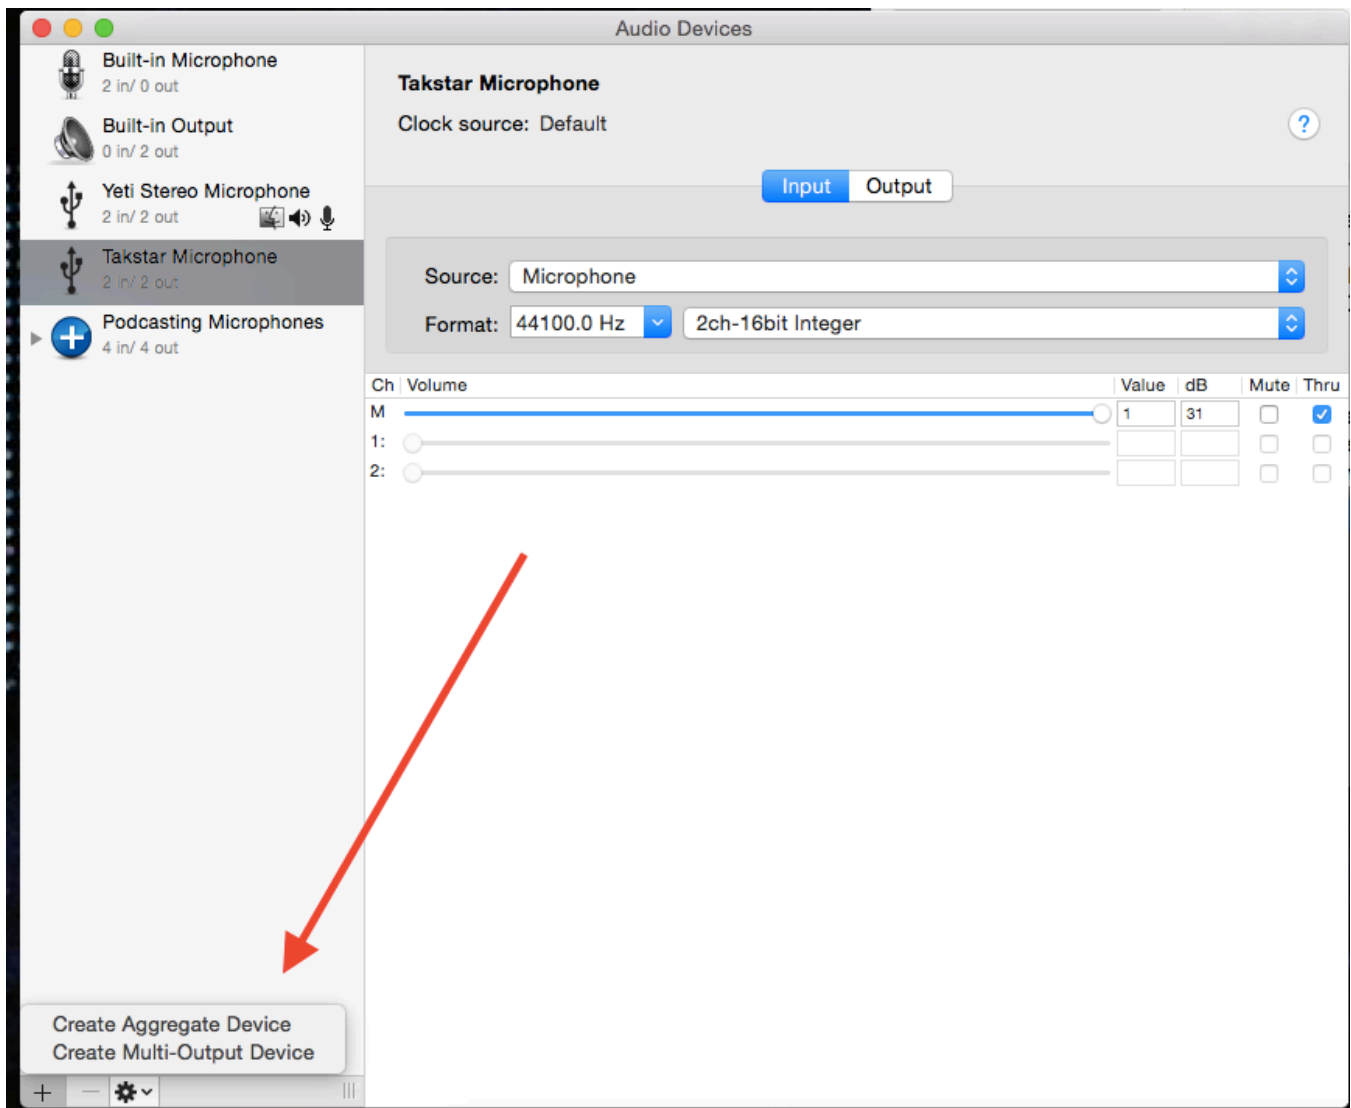

and see if Yeti Stereo Microphone and Takstar Microphone are listed in the left container

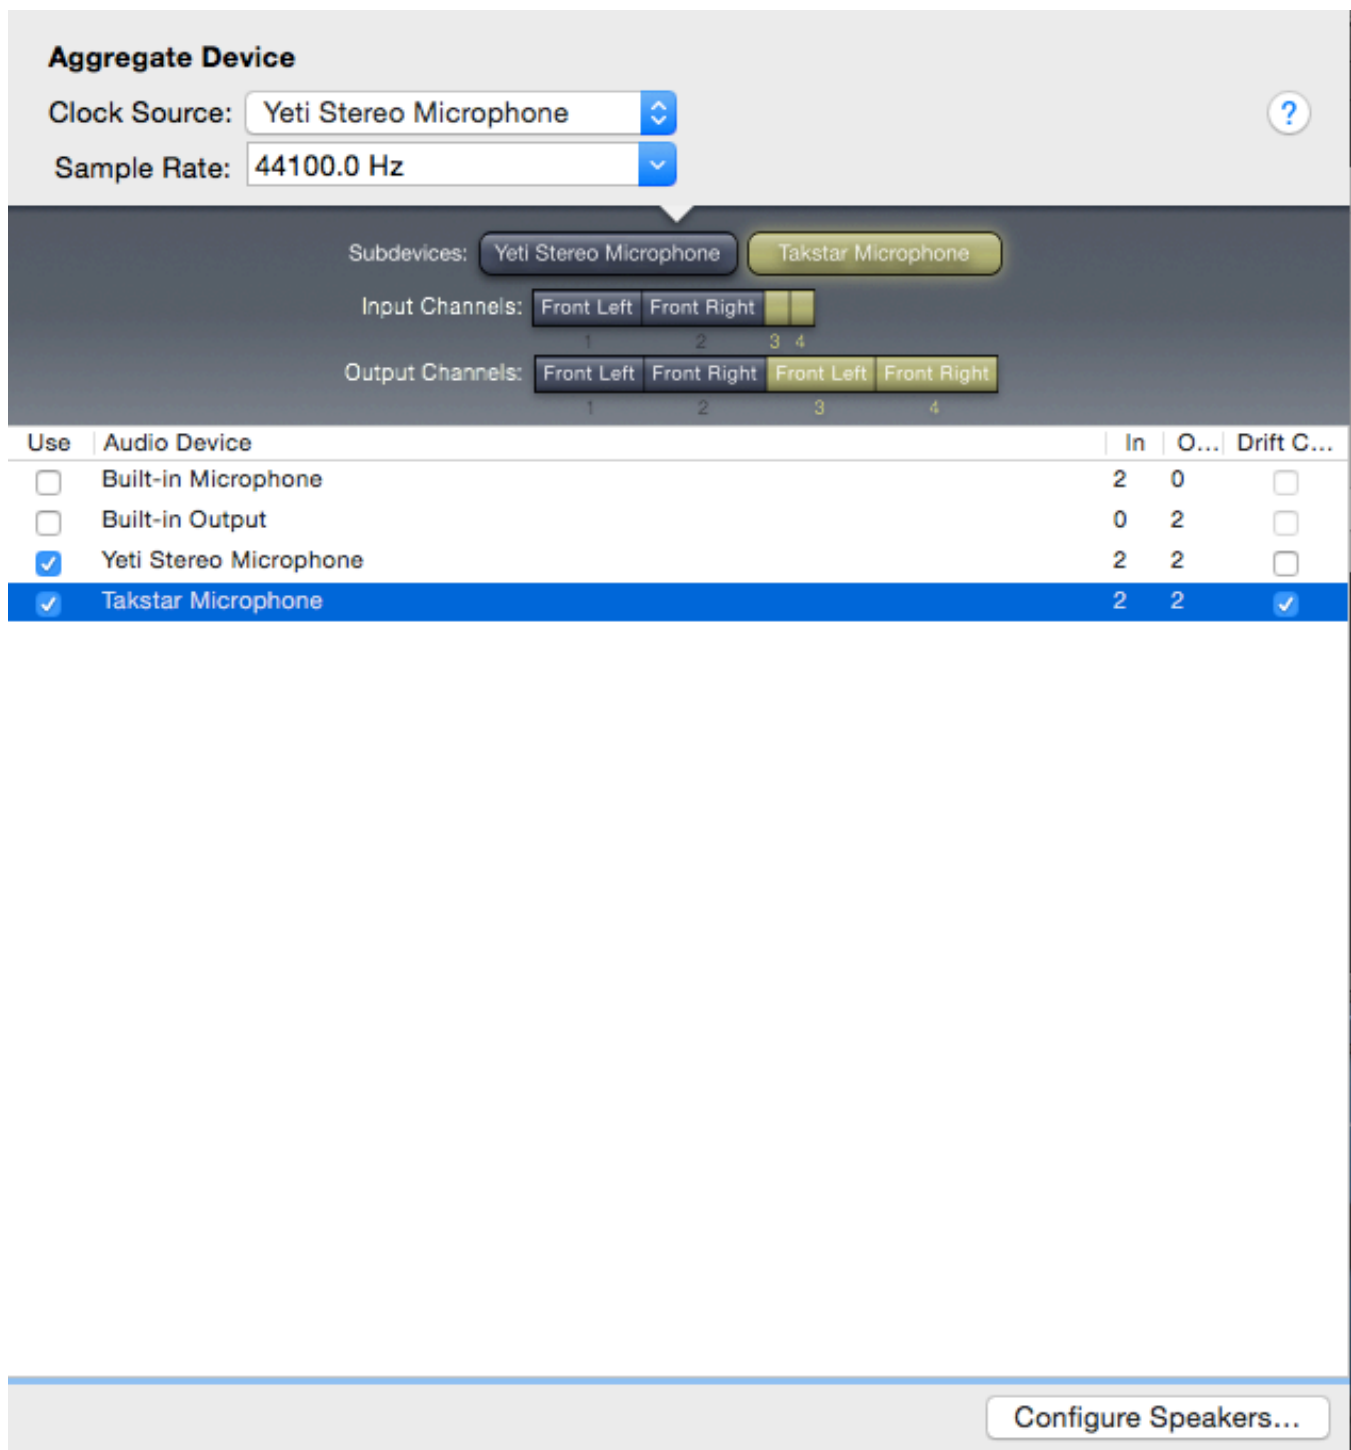

Step 3 Aggregate Devices

In the left container if you don't see a blue circle with a plus sign that says "Podcasting Microphones", click on the + sign at the bottom of the window and select Create Aggregate Device

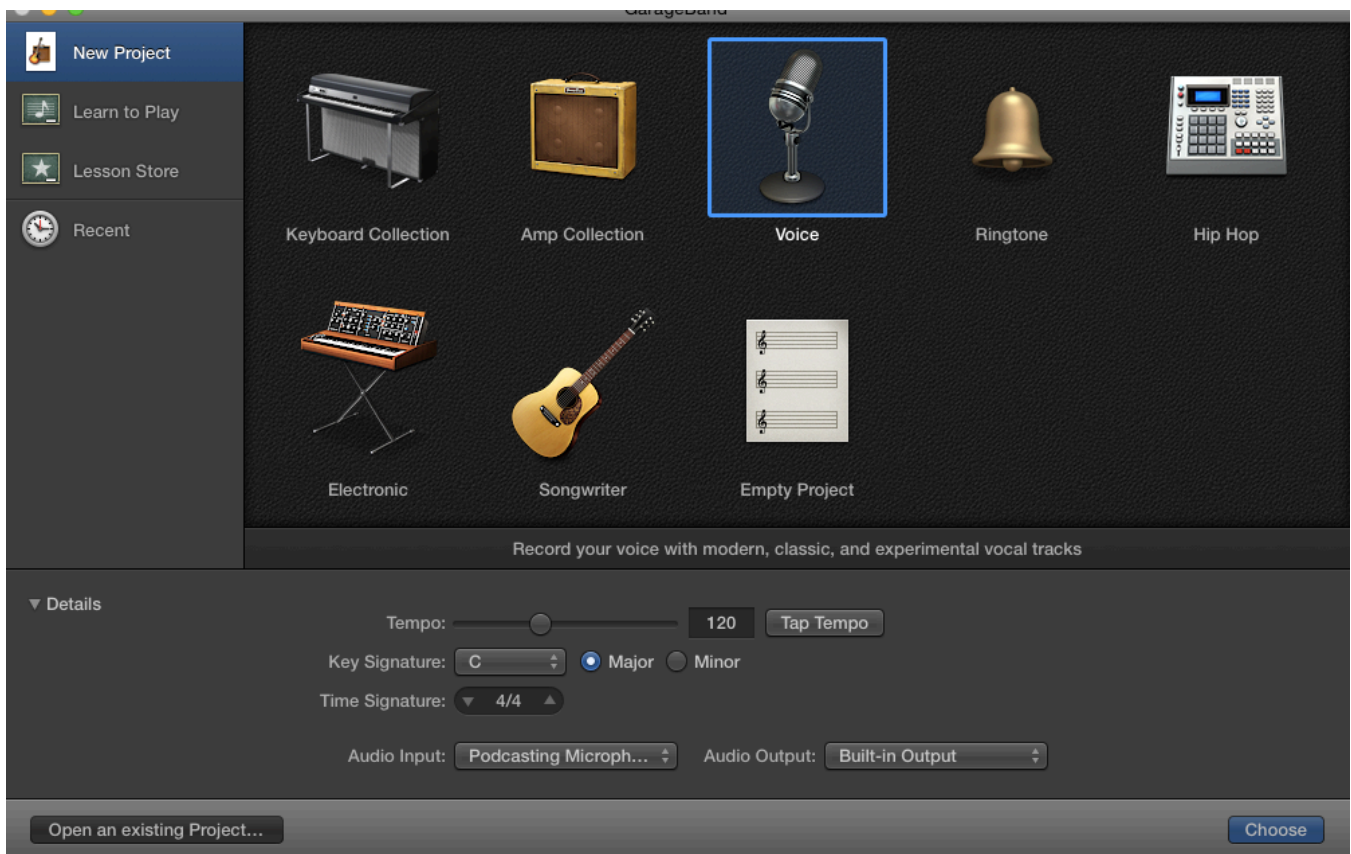

Select the blue circle, and click on the checkboxes next to the two microphones that are connected Yeti Stereo Microphone and Takstar Microphone

Make sure it says 2 | 2 on both “In” & “Out” and “Drift Correction” is unselected

Step 4-6 Open Garageband

Open Garageband, which should be in the dock. A select your instrument/project screen will open up.

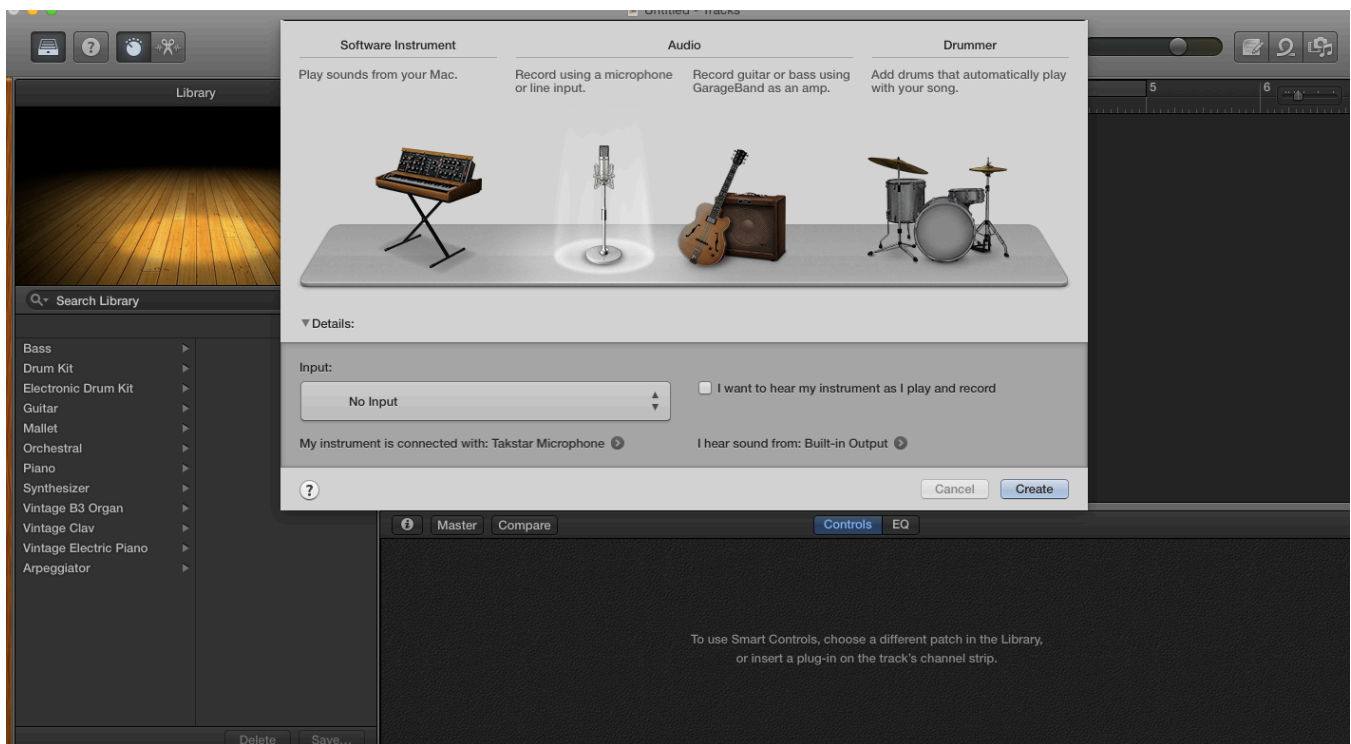

Make sure "Voice" is selected and that on the bottom "Audio Input" is "Podcasting Microphones" (or whatever the aggregated microphone device name is) and "Audio Output" is "Built-in Output". Select choose and you should see the following screen.

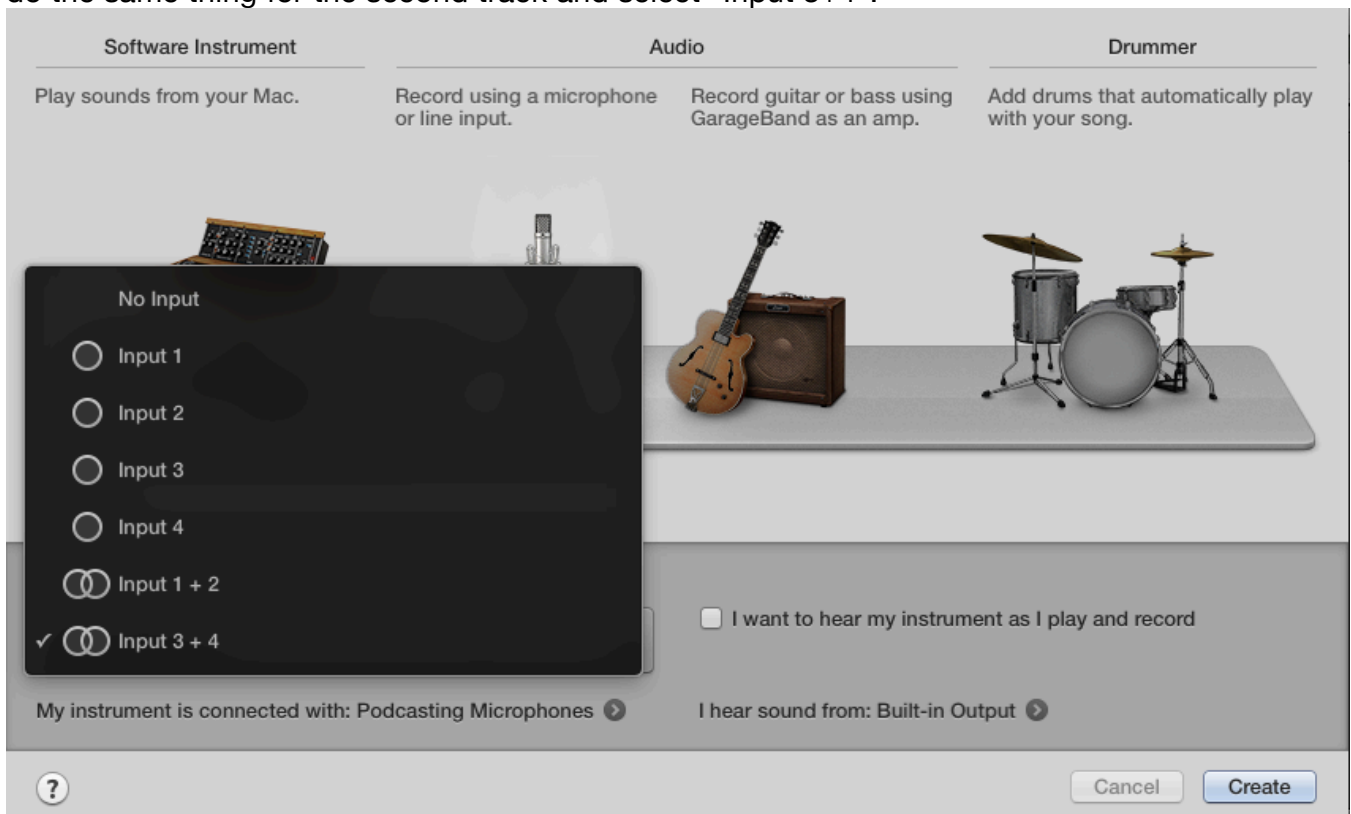

Delete all of the vocal tracks that are there - hit delete a bunch of times until you see this

If you go to input you probably won't see the microphone's selected, go to file—> preferences —> Audio/MIDI —> and change the Output Device and Input Device to Build-in-Output and Podcasting Microphones (respectfully)

Go back to white screen and make your "Input" "Input 1+2" and click create. You are going to do the same thing for the second track and select "Input 3+4".

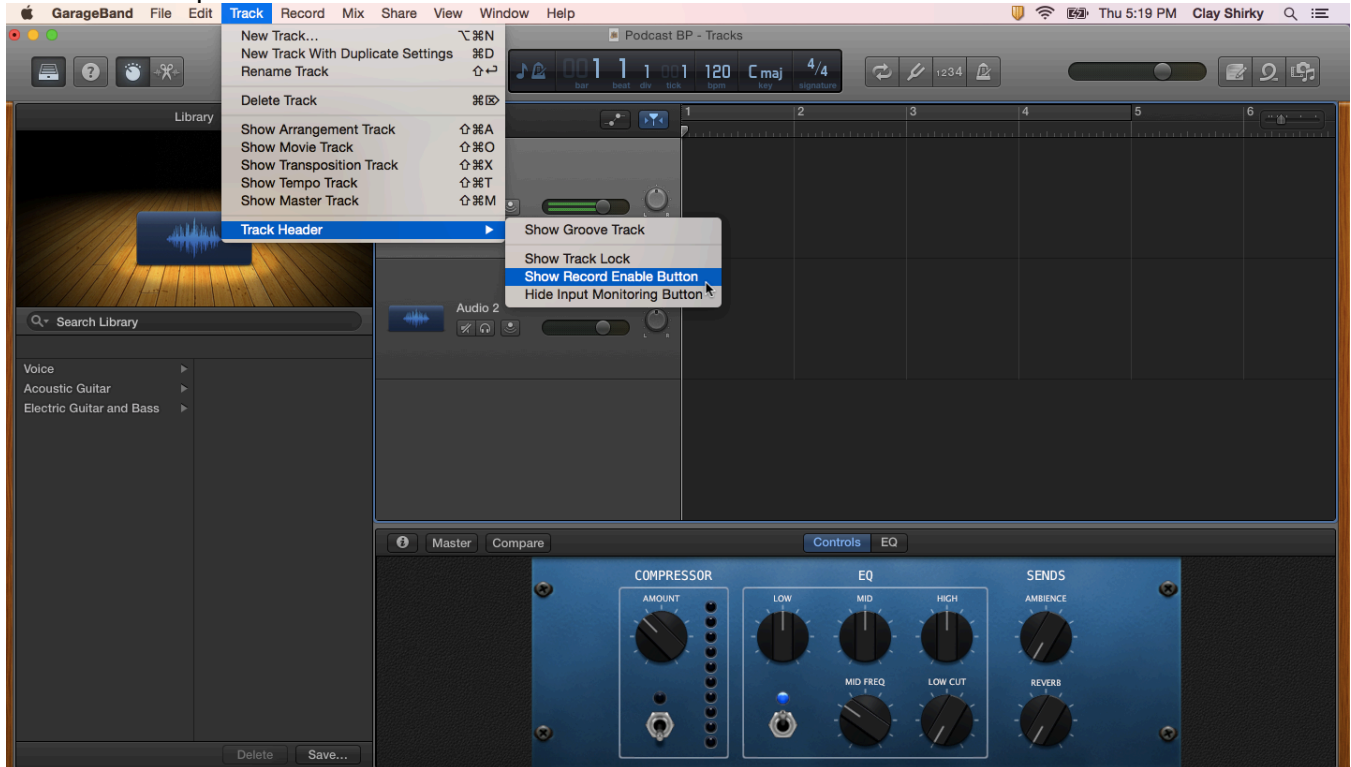

Once you have two tracks you are almost ready to record.

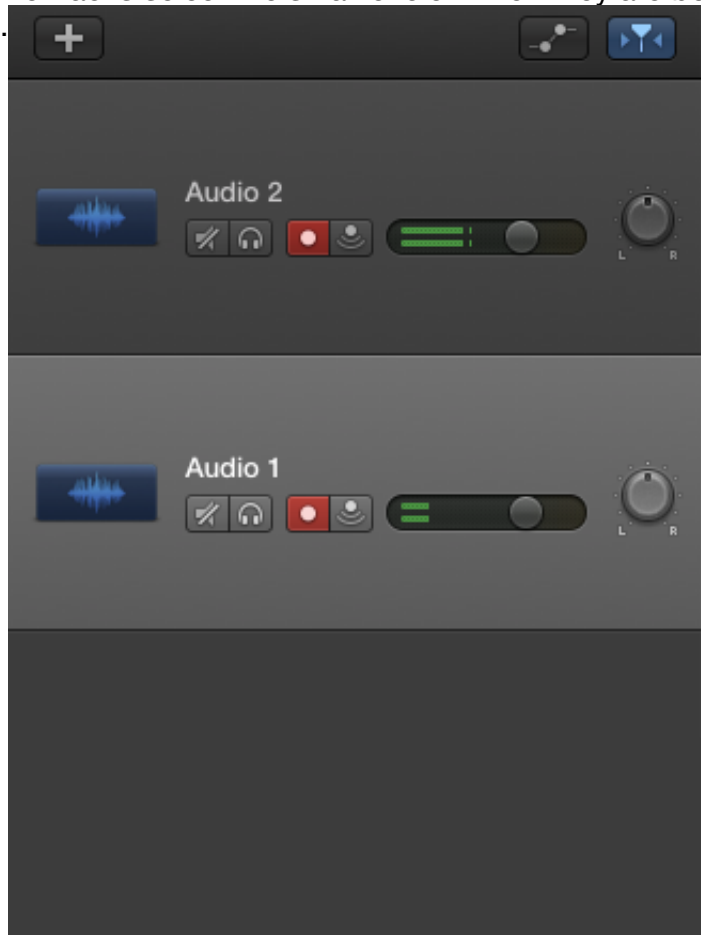

.

Last two important things you need to do.

First Go to top menu bar and select Track —> Track Header —> Show Record Enable Button

On both of the tracks select the small circle. When they are both selected they will both be flashing red.

Last before you record click on both of the upside down with icons next to the red flashing squares to make sure that the devices are picking up on each other.

Once you hear the feedback unselect them and hit record.
If you are successful, your screen should look something like this.

Happy recording.

You can also go to the desktop and click on Podcasting BP and forgo most of these steps :)

More you know right?!
